Gowalipura, Sadar, Nagpur, Maharashtra 440001

PROFILE

Detail-oriented Software Developer with 3 years of experience in ASP.NET, ASP.NET Core, MVC, ADO.NET, and SQL Server (including Stored Procedures, Functions, and Indexes). Skilled in building secure and scalable applications using Web API, JWT Authentication, and Role-based Authorization. Proficient in front-end technologies like HTML, CSS, jQuery, Ajax, and backend frameworks such as LINQ and Entity Framework. Experienced in using Postman for API testing, and FileZilla and FTP for efficient file management. Adept with Git for version control, ensuring seamless collaboration and code management. Strong problem-solving skills, quick to learn new technologies, and effective both independently and in teams. Seeking to leverage my expertise in a challenging application development role to drive growth and innovation.

SUMMARY

Over 3 years of hands-on experience in software development, contributing to various projects across the Development, Design, Implementation, Testing, and Maintenance phases. Proficient in ASP.NET Core, MVC, .NET Framework, C#, MS SQL Server, and Entity Framework, with a strong focus on backend development. Skilled in front-end technologies, creating dynamic and responsive web application interfaces using HTML, CSS, jQuery, Bootstrap, and JSON to ensure user-friendly designs. Solid understanding of Object-Oriented Programming (OOP), enabling the development of clean, maintainable, and efficient code following best practices. Advanced expertise in SQL development, including writing complex queries, Stored Procedures, Functions, Triggers, and working with Cursors. Proficient in database management using SQL Server and MySQL. Experienced in all stages of the Software Development Life Cycle (SDLC), including Requirements Analysis, Design, Development, Documentation, Testing, Deployment, Version Control, and Production Support. Skilled in using Git, GitHub, and Core FTP LE for version control and source code management, promoting smooth collaboration within team environments. Familiar with tools like Visual Studio, SQL Server Management Studio (SSMS), Postman, Zoho, Jira, and Teams for development and collaboration. Experienced in integrating third-party APIs, with expertise in Web API, JWT Authentication, and Role-based Authorization. Highly motivated, customer-focused, and committed to leveraging analytical skills and technical expertise to contribute to organizational growth in web application development.

SKILLS

Languages & Frameworks: C#, ASP.NET, ASP.NET Core, .NET Framework, jQuery, AJAX, HTML5, CSS3, SQL, JSON

Development: ASP.NET MVC, Web APIs (RESTful, JWT Authentication, Role-based Authorization), Entity Framework, LINQ, ADO.NET

Database: SQL Server, Stored Procedures, Functions, Triggers, Joins, Indexes, Query Optimization, Cursors, SSMS

Practices & Collaboration: Object-Oriented Programming (OOP), Version Control (Git, GitHub), SDLC, Agile Methodologies, Visual Studio, Postman, Core FTP LE, Microsoft Teams, Jira, Zoho

WORK EXPERIENCE

Company Name : Nass Technologies Nagpur

Duration: March - 2022 to Current Role: Jr.

Dot Net Developer

Project : Sitemap URL Generator (MVC Web App)

Responsibilities:

- Designed and developed the entire application from scratch using ASP.NET MVC, adhering to the MVC pattern for clean separation of concerns and scalability.
- Implemented database operations using SQL Server Stored Procedures and Triggers to efficiently manage URLs and prevent duplicate sitemap entries.
- Created a user-friendly interface (View) for generating, previewing, and managing sitemap URLs, ensuring ease of use and a seamless user experience.
- Developed Controller logic to handle user actions, validate inputs, and coordinate data flow between the Model and View.
- Built a URL validation system to automatically detect and remove outdated or non-indexed URLs before submitting new ones to Google Search Console, improving index accuracy.
- Ensured an optimized and error-free sitemap generation workflow, enhancing SEO performance and reducing manual effort in URL management.
- Followed best practices in code structure, performance, and error handling, resulting in a reliable and maintainable application.

Project : Bulk Email Automation System (Web Api)

Responsibilities:

- Integrated Zoho CRM using HTTP Client and API access key to fetch leads in real-time, enabling up-to-date and accurate targeting for email campaigns.
- Enabled personalized email sending by dynamically selecting SMTP credentials based on client configuration, improving sender reputation and delivery rates.
- Built custom email sequencing and scheduling logic using SQL Server stored procedures, allowing users to define delays and timings, and storing sequences in structured database tables for easy management and tracking.
- Implemented a background service that runs based on user-defined schedules, sending emails periodically without manual intervention to ensure timely and automated campaign execution.
- Applied email throttling mechanisms to control send rates, avoiding email provider blacklisting and ensuring consistent, high deliverability across all campaigns.
- Designed a secure SMTP credential management system that encrypts and manages credentials per client, supporting system scalability and safe handling of sensitive data.
- Utilized Entity Framework Core for efficient and maintainable database access, managing user profiles, email history, campaign settings, and SMTP configurations.
- Supported multiple SMTP providers with dynamic switching logic, enabling fallback options and optimized routing for improved delivery success and flexibility.

Project : Future Inspire(Web API MLM Application)

Responsibilities:

- Developed MLM Web API with .NET Core, optimizing data handling using SQL Server Stored Procedures for user, referral, commission, and product data.
- Designed and implemented Stored Procedures for managing MLM referral structures, commission calculations, and user transactions.
- Integrated Entity Framework Core for user authentication, role-based access, and secure login/logout functionality.
- Implemented JWT authentication for secure access control, token expiration, and renewal.
- Built middleware for logging and exception handling, improving stability and debugging.
- Troubleshot issues across modules like referral tracking and commission calculations.
- Stayed updated with .NET Core, Entity Framework, and SQL best practices for continuous code improvement.
- Collaborated with cross-functional teams to ensure functional requirements and deadlines were met.
- Created technical documentation for API endpoints, database models, and business logic.
- Managed Git version control, resolving conflicts and maintaining development flow.
- Assisted in deployment and post-deployment monitoring in the production environment.
- Followed coding best practices for readability, consistency, and performance.
- Identified and solved technical issues, ensuring smooth project progress.
- Contributed to sprint planning to define milestones and track project goals.

Project : Path Lab Management (MVC Application)

Responsibilities:

- Developed features in ASP.NET Core MVC for Path Lab Management, using SQL Server Stored Procedures for efficient data retrieval and manipulation.
- Designed Stored Procedures, Functions, and Triggers for scalable database operations.
- Integrated Entity Framework for user authentication, session management, and secure login/logout functionalities.
- Implemented session expiration to safeguard user data and prevent unauthorized access.
- Troubleshot and debugged issues, improving stability and performance.
- Stayed updated with .NET, Entity Framework, and SQL best practices for better code quality and feature integration.
- Collaborated with cross-functional teams to meet project requirements and deadlines.
- Created technical documentation for easy system maintenance and extension.
- Managed version control with Git, resolving conflicts and ensuring smooth development.
- Assisted in deployment, ensuring successful production integration.
- Followed coding best practices to maintain clean, readable, and efficient code.
- Identified and resolved technical challenges promptly to keep the project on track.
- Contributed to sprint planning and team meetings to define milestones and ensure project alignment.

HIGHEST QUALIFICATION

Bachelor of Computer Applications (BCA)

LANGUAGES

Sant Gadge Baba University, Amravati (2022)

ENGLISH , HINDI, MARATHI (Read, Write, Speak)
